Service Instruction

Bulletin No. A-105, Rev. B

Issue Date: March 21, 2003

DOCUMENTATION PROCEDURE FOR INSTALLATION OF NEW FACTORY REBUILT JANITROL HEATERS

The JanAero Devices Factory Rebuilt Heater you are preparing to install incorporates several significant product improvements and changes to your original heater. The two primary improvements to Factory Rebuilt heaters are the incorporation of our new FAA approved Cermakote™ combustion tube and the new FAA approved combustion air switch. *Note: The factory rebuilt heaters are identified by the "FR" prefix on the data plate.*

A FAA field approval may be necessary because the new heater has a new part number and model number. The FAA has approved the supersedure of these part numbers and model series as indicated in JanAero Devices Service Letter #A-101 (see attached)
